

We would like to express our sincere appreciation to Dr. Robson for all his work with our child. Over the course of approximately eighteen months, we watched our son's confidence grow as we followed the advice we received from The Children's Clinic. We are living happily with the successful results of the program established for him.

Despite the time commitment involved, it was a relief to follow a course of treatment that was relatively noninvasive and did not rely heavily on medications. We were treated respectfully at all times and easily understood explanations were always provided.

As parents we are delighted in the progress our son made. His confidence has increased considerably and he now enjoys life more fully by taking part in activities such as sleepovers which he had avoided previous to his visits with Dr. Robson. We happily encourage other parents to work with The Children's Clinic so that they too may enjoy the benefits with their children.
